Clark,

Dr. Gallo wrote a follow up letter thanking you for your support. Where can we mail the letter?

Thanks much,

Nora

Subject: You deserved it, Dr. Gallo...

Dear Bob:

I read your press release (<http://www.ihv.org/news/gallostatement.pdf>) where you graciously thank Dr. Montagnier for expressing the sentiment that you were "equally deserving" of the prestigious Nobel Prize. I cannot say that I would be as gracious and as tolerant as you. In fact, I am incensed that you have been slighted, snubbed, and ignored for your many contributions as co-discoverer of this nefarious virus. Those no-nothings in Stockholm don't know what the hell they are talking about!

Anyway, I am doing a follow-up to my important investigation, entitled "Gallo's Egg" (<http://www.cwbp.com/GallosEgg-17Jul08.pdf>). I very much would like to interview you and hear the unvarnished truth from your perspective on this monumental and insensitive snub you have suffered. Perhaps, we can demand a re-vote or something.

Please let me know if I can further assist you.

Your humble servant,

Clark Baker

Dear Dr. Gallo:

I was thrilled to learn today that Luc Montagnier won the Nobel Prize for his important discovery of HIV (formerly called HTLV-3) several years back from that patient who had lymphadenopathy. It's hard to imagine how Montagnier isolated it within one patient and not among others. He is either the luckiest scientist on the planet or the most brilliant.

At the same time, I am shocked that you could not share in his one-quarter (one-eighth) of the esteemed honor. After all, you were "co-discoverers" of this terrible scourge that has killed millions of people (but no chimpanzees). Then again, Max Essex should also share in the honor for his tireless efforts to cure Leukemia in cats (one-twelfths?). This is so embarrassingly awkward - and so totally unfair that you have been slighted in this breathtakingly conspicuous manner and denied your rightful place among the pantheon of great scientists who have saved millions of lives from these awful microbes. Clearly, the water they are drinking in Stockholm must be spiked with something because these Swedes have lost their marbles. Then again, one never knows what those Lutherans are thinking.

Perhaps you will receive your long-overdue Nobel Prize for discovering HTLV-1 or HTLV-2, which caused millions of cases of Leukemia among innocent victims all over the atolls of Japan and the Caribbean. If brilliant meteorologists can share their prize with Al Gore, and Jimmy Carter can share his prize with Yassar Arafat, Dr. Montagnier can certainly share his prize with you.

Your biggest admirer,

Clark Baker
